Audit Tool for Cellular Therapy

ICCBBA is pleased to announce the release of a new ISBT 128 compliance audit tool for use with cellular therapy products.

The new tool was developed to provide a means of determining compliance to the ISBT 128 Standard for use by any cellular therapy facility around the world. It should be noted, however, that the tool does not take into consideration requirements from national regulatory bodies and may not cover all labeling requirements of cellular therapy accreditation bodies. Additionally, the tool does not ensure that proper Product Codes have been selected.

Key features of the tool include:

- The ability to scan and manually enter product information
- An interactive user interface
- Links to helpful documents/databases
- The ability to add notes during the audit
- A running tally to aid in audit “scoring”

While ICCBBA has made validation tools available in the past, this is the first time an audit tool has been released. Input was received from industry experts and the international Cellular Therapy Coding and Labeling Advisory Group that is co-sponsored by ICCBBA, AABB, the Foundation for the Accreditation of Cellular Therapy, the International Society for Cellular Therapy, and others.

ISBT 128 users should be aware that this tool may be used in future accreditation audits to verify compliance with the ISBT 128 labeling standard. Accredited users are encouraged to contact their accreditation bodies to find out if and how the tool will be used.

Feedback on the cellular therapy audit tool will be used in creating similar audit tools for other subject areas in the future.
